

Soil Management and Crop Rotation

C 6.0

EN-QS-F-181-6, 2013.12.02

Page 1 of 2

Operator #: 2487

Operation Name: Randy & Whilden Hughes

Date: 05/21/2025

1. What are the major practice components of your soil-building/crop nutrient management plan?

- | | | |
|---|---|---|
| ☒ crop rotation | ☒ incorporation of crop residue | ☒ green manures |
| ☒ cover crops | ☒ compost | ☒ manure |
| ☐ mined lime | ☐ mulch | ☒ soil inoculants |
| ☐ fertilizer materials or blends | ☐ biodynamic preparations | |
| ☒ other (describe): | | |

corrective nutrients, micro nutrients, lime when needed based on soil type

2. What are the main crop rotations that are used in your operation?

6 year rotation. Although it varies from year to year, is typically, corn/ peas,snaps, or soybeans/wheat and/or clover/corn/ sunflowers/ wheat or rye

3. What problems do your crop rotation and soil management practices seek to improve?

- | | | |
|---|---|---|
| ☒ increase organic matter | ☒ water availability | ☒ water infiltration/drainage |
| ☒ soil compaction or crusting | ☒ soil structure | ☒ water erosion |
| ☒ wind erosion | ☒ deficient nutrients | ☒ excess nutrients |
| ☐ salinity | ☒ pH | ☒ weed management |
| ☒ pest management | ☒ disease management | ☒ overall farm biodiversity |
| ☐ other (describe): | | |

Soil Management and Crop Rotation

4. Describe, and indicate, as applicable, how you monitor the effectiveness of your rotation and soil management plan?

☒ soil observation

☒ soil (nutrient) tests

☒ soil organic matter content

☒ crop observation

☒ crop yield comparison

☒ crop quality tests

☒ plant tissue tests

☒ microbial tests

☐ other (describe):

5. When and how often (daily, weekly, monthly, yearly, as needed) do you do each type of monitoring?

soil and crop observation done at least weekly, Soil tests done on a 3 year rotation. tissue tests, microbial tests, OM test are all as needed. Yield and quality done annually.

6. What monitoring records do you keep?

yield, planting, irrigation, soil tests, tillage records, input records, rainfall, tissue samples, photos, NDVI imagery, growing degrees, soil temp
