Operator #: 2487

Operation Name: Randy & Whilden Hughes

Date: 05/21/2025

Standards require the use of organically grown seeds, and/or planting stock. Synthetic seed treatments are prohibited unless specifically approved by the certification program you are requesting. Annual seedlings must be produced according to organic standards. Non-organic perennial plants (planting stock) must be managed organically for a specified period of time prior to harvest of crop or sale of the plant as certified organic planting stock. Contact OCIA if you need to use non-organic seedlings because of an emergency.

If using non-organic seed and/or planting stock, you must have records of your attempts to source organic seed and/or planting stock.

Please be aware that this includes seed for cover crops.

If non-organic seedlings are used, you must maintain records to verify when the organic management of these seedlings began.

A. Seed and Planting Stock

1. List all seeds, seedlings, perennial stock, and seed treatments used or planned for use in the current crop season. Check the appropriate boxes and provide other information as needed. Attach additional sheets if necessary. **Ensure that all seed and inoculants labels and receipts, documentation of commercial unavailability for organic seeds, seedlings, or planting stock, and any necessary Non-GMO Affidavits (for seed available in GMO varieties) are available for the inspector.**

Seed (Common Name)	Brand	Variety	Organic	Treated or Untreated	Source	Type/Brand of Treatment
see 2025 seed sheet			Yes	Treated	On-Farm	

2. **OCIA Standards** – If conventional seeds were purchased was a seed exemption requested and granted by OCIA?
☐ YES ☐ NO

B. Carryover Seed and Planting Stock Inventory

1. List all seeds, seedlings, perennial stock, and seed treatments in inventory that were purchased or saved from prior seasons. Check the appropriate boxes and provide other information as needed. Attach additional sheets if necessary. Although they may have been reviewed at a prior inspection, **ensure that all seed and inoculants labels and receipts, documentation of commercial unavailability for organic seeds, seedlings, or planting stock, and any necessary Non-GMO Affidavits (for seed available in GMO varieties) are available for the inspector.**

C. Commercial Availability

1. If you use seed or planting stock (annual and/or perennial) that is not certified organic, describe (in general terms) how you determine whether an equivalent organic variety is commercially available (appropriate form, quantity, and quality), and describe any efforts you are making to source more organic seed/planting stock in the future.

We are constantly looking for good quality organic seed stock. Due to the nature of our specialized rotation, this is not always possible. Many crops in our rotation, such as blue corn, white sorghum, or snap beans do not have reliable and consistent supply of organic seed. Typically when looking for seed we contact every reputable seed dealer in our region to search for certified seed.
