11. Day/Night Theme

12. Troubleshooting

13. Quick Reference Card

1. System Overview

The Glomalin Platform is a single sign-on portal that connects all farm operation tools in one place. You log in once and get access to the modules you need based on your role.

What the system tracks:

Area	Module	What It Does
Grain	Grain Tickets	Record loads from combine to settlement
Planning	Farm Budget	Plan crops, inputs, seeds, orders by field
Compliance	FSA Acres	USDA acreage reporting & crop insurance
Procurement	Seed Inventory	Order, receive, and reconcile seed & inputs
Fields	Farm Registry	Master list of all fields and acres
Organic	Organic Cert	NOP compliance and audit documentation
Malting	Meristem Malt	Batch cost calculator for malt operations

All data flows between modules automatically. For example, field acres in the Farm Registry feed into Grain Tickets for yield calculations, and Farm Budget forecasts feed into Seed Inventory for ordering.

2. Roles & Access Levels

Role	Who	What They Can Do
Admin	Farm owner/manager	Full access. Create users, assign roles, grant/revoke module access.
Agronomist	Crop advisors	Read/write access to all granted farm data modules.
Operator	Truck drivers, field crew	Enter grain tickets, view field info, confirm deliveries.
Viewer	Landlords, accountants, lenders	Read-only access to granted modules. Can export CSV but cannot edit.

Important: Your role sets your general permission level, but an admin must also grant you access to each specific module. You will only see modules you have been granted on your dashboard.

3. Admin SOP: Creating & Managing Users

3.1 — Inviting a New User

1. Log in to the portal.
2. Click **User Management** in the portal footer (admin-only link).
3. On the Admin panel, click **Invite User**.
4. Fill in:
 - **Email** — the person's email address (they'll get a signup link)
 - **Role** — select from Admin / Agronomist / Operator / Viewer
 - **Modules** — check the boxes for each module they need
5. Click **Send Invite**.
6. The new user receives an email with a link to set their password.

3.2 — Recommended Module Grants by Role

Role	Recommended Modules
Operator (truck driver)	Grain Tickets
Operator (field crew)	Grain Tickets, Farm Registry
Agronomist	Farm Budget, FSA Acres, Insurance, Seed Inventory, Farm Registry, Grain Tickets
Viewer (landlord)	Farm Registry, FSA Acres
Viewer (accountant)	Grain Tickets, Farm Budget
Admin	All modules

3.3 — Changing a User's Role or Access

1. Go to the Admin panel.
2. Find the user in the table.
3. To change their role: use the **role dropdown** next to their name.
4. To grant/revoke a module: **toggle the switch** for that module.
5. Changes save immediately — no save button needed.

3.4 — Removing Access

To remove a user's access entirely, revoke all module toggles. There is no "delete user" — just remove all module grants and they will see an empty dashboard.

4. Operator Instructions: Logging In

First-Time Login

1. Check your email for an invite from Glomalin.
2. Click the link and set your password (minimum 8 characters).
3. Go to the portal URL (provided by your admin).
4. Enter your **email** and **password**.
5. Click **Sign In**.

Returning Login

1. Go to the portal URL.
2. Enter email and password.
3. Click **Sign In**.
4. You land on the **Dashboard** showing your available modules.

Forgot Password

1. On the login screen, click **Forgot Password**.
2. Enter your email.
3. Check your inbox for a reset link.
4. Click the link, enter a new password, confirm it.
5. Log in with your new password.

Session Timeout

If you see "Your session has expired," just log in again. Your work is saved — sessions expire after inactivity for security.

5. Module Guide: Grain Tickets

Who uses this: Operators, agronomists, admin **Purpose:** Record every load of grain from field to buyer

Entering a New Ticket

1. From the dashboard, click **Grain Tickets**.
2. Click the **New Ticket** card.
3. Fill in the form:

Field	What to Enter	Example
Date	Date on the scale ticket	09/15/2026
Farm	Which farm the grain came from	Hughes Home
Net Weight	Weight in pounds from the scale ticket	54,320
Moisture %	Moisture reading from the ticket	14.2
Crop	What crop	Organic SRW Wheat
Ticket Number	Number printed on the ticket	H066842
Destination	Where the load went	Bunge Logansport
Notes	HBT bin number, truck ID, anything else	Bin 4, Truck 2
FM	Foreign material percentage (if listed)	0.3

1. Check the **live preview panel** on the right — it shows calculated bushels, test weight, and any discounts.
2. Click **Submit**.

Viewing & Filtering Tickets

1. Click **Ticket Log**.
2. Use the filters at the top:
 - **Search** — type any keyword to search all fields
 - **Farm** — filter by farm name
 - **Crop** — filter by crop type
 - **Destination** — filter by buyer
 - **Year** — filter by crop year
 - **Date range** — pick start and end dates
3. Quick presets: "This Week", "This Month", "Last 30 Days", "All"
4. Click any row to edit that ticket.
5. Click **Export CSV** to download filtered results.

Farm Summary

Click **Farm Summary** to see yield per acre by farm and crop. This pulls acres from the Farm Registry (shown with a green **R** badge) to calculate yield/acre.

Settlements

Settlements are handled by the agronomist or admin:

1. **Import** — Upload a settlement CSV/Excel from the buyer (co-op, elevator). Map the columns to match. Preview and commit.
 2. **Reconciliation** — The system compares raw pounds on your tickets vs. the buyer's settlement. Flagged discrepancies appear in red.
 3. **Season Summary** — See total paid by buyer by crop.
-

6. Module Guide: Farm Registry

Who uses this: Admin, agronomists **Purpose:** Master list of all fields — THE source of truth for acres across the entire system

Layout

- **Left panel:** Searchable table of all fields
- **Right panel:** Edit form for the selected field

Viewing Fields

1. From the dashboard, click **Farm Registry**.
2. Scroll the left table or use the **search bar** to find a field.
3. Filter by **Ownership** (Rented/Owned/Mixed) or **Organic** status.
4. Click a field row to see its details on the right.

Editing a Field (Admin/Agronomist)

1. Select a field from the left panel.
2. Edit the right panel:
 - **Field Name** — display name
 - **Reporting Acres** — THE canonical acre number used across all apps
 - **Ownership** — Rented, Owned, or Mixed
 - **Certification** — Organic, Conventional, Transitional, or Split
 - **Organic Acres** — organic-certified acres within the field
 - **Tillable Breakdown** — Rented tillable, owned tillable, non-tillable
 - **Landlord** — name and contact info
 - **Rent** — annual rent amount (rate auto-calculates)
 - **Aliases** — alternate names other people use for this field
 - **Notes** — special info (drainage, restrictions, etc.)
3. Click **Save**.

Adding a Field

1. Click **Add Field** above the table.
2. Fill in the form on the right.
3. Click **Save**.

Important

When you change **Reporting Acres** here, other modules pick up the change when they sync. This is the one place to update acres.

7. Module Guide: Farm Budget

Who uses this: Admin, agronomists **Purpose:** Plan the crop year — fields, enterprises, inputs, seeds, orders, deliveries

Navigation

The Farm Budget has tabs across the top:

Tab	What It Does
Dashboard	Summary of total enterprises, fields, acres
Fields	View and manage fields (syncs from Farm Registry)
Enterprises	Assign crops to fields by certification
Forecasts	Predicted input needs by product and field
Orders	Create and track purchase orders
Deliveries	Record received goods against orders
Seeds	Seed selection by field
Reference	Product catalog, suppliers, pricing
Reports	Print 5 pre-formatted reports

Key Workflows

Sync fields from registry:

1. Go to Fields tab.
2. Click **Sync from Registry**.
3. Review changes and confirm.

Create an enterprise:

1. Go to Enterprises tab.
2. Click **Add Enterprise**.
3. Select field, crop, certification (organic/conventional), and planned acres.
4. Save.

Print a report:

1. Go to Reports tab.
2. Select one of: Agronomist Order Sheet, Field Input Plan, Forecast Summary, Order Status, Delivery Receipt Log.
3. Click **Print** or use browser print (Ctrl/Cmd + P).

Map View

Click the map icon to see fields laid out spatially (if shapefiles are uploaded in Farm Registry).

8. Module Guide: FSA Acres & Insurance

Who uses this: Admin, agronomists **Purpose:** USDA acreage reporting, crop insurance management, conservation programs

FSA Data Tab

This is where you prepare your acreage report for the FSA office.

1. Click **FSA Data** tab.
2. Review each CLU (Common Land Unit) record.
3. For each field, verify: Farm #, Tract, CLU, Crop, Acres, Plant Date, Tillage, Cover Crop.
4. Use **Sync from Macro** to pull enterprise data from Farm Budget and compare side-by-side.
5. Mark fields as **Reported** once filed with FSA.
6. Click **Reports** to generate the Acreage Reporting Summary for your FSA appointment.

Insurance Tab

1. Click **Insurance** tab.
2. View coverage matrix showing all policies.
3. Each row shows: Farm, Crop, Coverage %, Unit, Planted Acres, APH, Guarantee, Actual Yield, Shortfall, Indemnity estimate.
4. Click **Add Policy** to enter a new insurance line.
5. Use **Grain Ticket Yield Sync** to pull actual yields from settled grain tickets.
6. Review shortfall column — red rows indicate potential claims.

Pricing Tab

1. Click **Pricing** tab.
2. View USDA spring/fall crop prices.
3. Click **Fetch USDA Prices** to pull latest data.
4. Override prices manually if needed (toggle manual override).

GCS Tab

Conservation program enrollments (cover crop practices, reduced tillage, no-till).

9. Module Guide: Seed Inventory

Who uses this: Admin, agronomists, operators (delivery verification) **Purpose:** Track seed and input procurement from forecast to receipt

Tabs

Tab	What It Does
Dashboard	Summary stats: products, suppliers, open orders, delivery %
Products	View product catalog (synced from Farm Budget)
Suppliers	Manage supplier contact info
Forecasts	View predicted needs from Farm Budget
Orders	Create and track purchase orders
Deliveries	Record received shipments
Returns	Track returned goods and credits
Reconciliation	Compare forecast vs ordered vs delivered vs on-hand
Verify	Mobile-friendly delivery verification wizard

Verifying a Delivery (Operator Workflow)

This is the most common task for field operators:

1. Open **Seed Inventory** from the dashboard.
2. Click the **Verify** tab.
3. **Step 1:** Select the supplier from the dropdown.
4. **Step 2:** Use the camera button to scan the delivery ticket, or skip to enter manually.
5. **Step 3:** Review the scanned/entered data. The system auto-matches to pending deliveries.
6. **Step 4:** Confirm the receipt. Enter your name as the verifier.
7. **Step 5:** Done. The delivery is recorded and order status updates automatically.

Reconciliation

The Reconciliation tab shows a full picture:

- **Forecast** — what we planned to need
 - **Ordered** — what we ordered
 - **Delivered** — what arrived
 - **Returned** — what went back
 - **On Hand** — net available
 - **Balance** — surplus or shortfall
 - **% Delivered** — completion percentage
-

10. Module Guide: Meristem Malt

Who uses this: Admin, malt operations staff **Purpose:** Calculate batch costs and break-even pricing for malt production

How to Use

1. Open **Meristem Malt** from the dashboard.
2. The **dashboard header** shows 8 key metrics: Cost/Batch, Cost/Lb, Break-Even, Selling Price, Margin, etc.
3. Scroll down through sections:
 - **Batch Configuration** — Set grain type, batch size, yield %, batches per year
 - **Variable Costs** — Edit per-batch costs (labor, water, gas, etc.) — click any number to edit
 - **Fixed Annual Costs** — Edit annual costs (auto-allocated per batch)
 - **Capital Equipment** — Enter equipment cost and useful life for depreciation
 - **Commonly Forgotten Costs** — Toggle on/off items like interest, insurance, rent
4. All changes recalculate the header metrics in real time.

What-If Scenarios

Scroll to the **What-If Scenarios** section:

1. Adjust the 3 sliders: Batches/Year, Batch Size, Selling Price/Lb.
 2. See instant margin and profit calculations.
 3. Compare current plan vs. 3 what-if scenarios in the comparison table.
 4. Toggle between Organic and Conventional grain to compare costs.
-

11. Day/Night Theme

All modules have a theme toggle in the top-right corner:

- Click **[day]** for a light background (easier in bright environments).
 - Click **[night]** for the dark soil theme (default, easier on eyes indoors).
 - Your preference is saved and remembered next time you open the module.
-

12. Troubleshooting

Problem	Solution
"Your session has expired"	Log in again. Your data is saved.
Module shows a blank page	Click Retry . If it persists, check with your admin — the app may be restarting.
Can't see a module on dashboard	Ask your admin to grant you access to that module.
Clicked a module and got redirected to dashboard	You don't have access to that module. Ask your admin.
Data looks outdated	Some cross-module data syncs on demand. Look for a Sync button.
Forgot password	Click "Forgot Password" on the login screen. Check your email.
CSV export is empty	Make sure you have data in the current filter view. Clear filters and try again.
Numbers look wrong in Grain Tickets	Check the moisture % and FM % — small changes affect bushel calculations significantly.
Can't edit a field in Farm Registry	Only Admin and Agronomist roles can edit. Viewers are read-only.
Print cuts off columns	Use landscape orientation. Or export to CSV and print from a spreadsheet.

13. Quick Reference Card

Print this page and post it in the office.

Login

- **URL:** *(your portal address)*
- **Email:** your assigned email
- **Password:** set via invite link

After Login

- You land on the **Dashboard**
- Click any module card to open it
- Only modules you have access to are shown

Most Common Tasks

Enter a grain ticket:

Dashboard → Grain Tickets → New Ticket → fill form → Submit

Look up a ticket:

Dashboard → Grain Tickets → Ticket Log → use search/filters

Check yield per acre:

Dashboard → Grain Tickets → Farm Summary

Verify a seed delivery:

Dashboard → Seed Inventory → Verify tab → follow 5-step wizard

Look up field acres:

Dashboard → Farm Registry → search field name

Export data:

Open any module → look for **Export CSV** button above the table

Print a report:

Open module → Reports tab → select report → Print

Need Help?
